

The Path of Water

1. Draw, label, AND COLOR a picture of each of the locations in the water cycle game. You must include ALL 9 locations in the water cycle, even if you didn't visit all of them.
2. Draw AND label arrows, showing the path of your water droplet through the water cycle. Label your arrow using the information from the "What happens to you" column on your Water Cycle Game: Participation Documentation.
3. You must illustrate each turn that happened to your water droplet, including any arrow that occurred more than once.
4. You do not have to write anything if your water droplet stayed in the same location. (This was where you had to "roll again").
